Copyright

Copyright is the right of creators to control use of their original works of authorship, including literary, musical, artistic, and dramatic creations. Works of authorship are protected by copyright as soon as they are created, whether or not they contain a copyright notice. Ideas, facts, inventions, and discoveries are not protected by copyright.

Copyright gives creators several exclusive rights over use of their works. If you don’t own a work’s copyright, you need permission of the copyright owner to legally:

- make copies of the work;
- distribute copies of the work;
- create new works derived from the work;
- perform the work publicly;
- or display the work publicly.

Otherwise, you infringe the copyright in the work. Note that linking is not a right protected by copyright. You can always copy and distribute links to copyrighted works on the Internet.

In certain circumstances, using parts of a copyrighted work is “fair use” and does not require permission. Making “fair use” of a work is not copyright infringement. The Fair Use Standard looks at four factors to determine if a use is “fair use”:

1. the purpose of the use;
2. the nature of the copyright work;
3. the amount of the copyrighted work used;
4. and the effect of the use on the market/value of the work.

Many creators have started using Creative Commons licenses to allow people to use their works without asking permission. The Creative Commons licenses list requirements, such as crediting the creator, and anyone who follows the requirements may use the licensed works.

Copyright protection does not last forever. Once the copyright in a work expires, the work enters the public domain, and anyone can use the work without permission. Works published before 1923 are in the public domain, as well as all works created by the United States government. Creators can also choose to release their works into the public domain before the copyright expires.

Plagiarism

Plagiarism is taking someone else’s words or ideas and passing them off as your own. You can avoid plagiarism by properly citing your sources, placing quotes in quotation marks, and using your own words to paraphrase other sources.

Plagiarism is separate from copyright infringement. You can infringe copyright in a work if you copy from it without permission, even though you use a proper citation. And you can plagiarize a work if you use it without a citation even though you had permission from the copyright owner. Also, plagiarism applies to all works, even those in the public domain that are not protected by copyright.
